

Gear Tip - Super Glue:

Keep a tube of super glue in your tackle box as it serves many useful purposes.

- **Lure Modification** – it can be used to keep trailers in place on spinnerbaits and soft plastics on hooks & jigs.
- **Rod Repair** – if an insert pops out of your line guide it can be used to bond the ceramic insert back in the frame and made the rod useful again in short time.
- **Secure Line Knots** – a drop of super glue on your line will keep it secure and help it stay in place.
- **Quick Bandage** – it can be used to seal line cuts, knife cuts or punctures in your hands or fingers. I used it to bond a deep cut in my finger and stop the bleeding.

When using Super Glue less is better. It works best in humid areas and your can help it's adhesion by wiping the surfaces with a damp cloth prior to bonding. If for some reason the bond does not hold you can always apply another coat.
